Recipe

Once you have your pipe cut to 150mm lengths glue the non-vented end cap on. Push the vented cap on as far as it goes and drill a 10mm hole through as straight as you can get it making sure you position it to go through both the cap and through the end of the pipe. This is important as it is the peg that holds the cap on. Tip unless you get the hole drilled in exactly the same spot on each station caps will not be interchangeable between stations so keep them together.
