Subject: submission on review Water certificate of title No 90**814473 (the certificate of title is with my valuable documents at the solicitors

Cockburn River unregulated water source.

firstly I say How rude and ignorant you are in not providing copies of the proposed review to those who will be directly affected by any changes you (the department) make.

secondly I really don't have time to waste in making this submission as the likely decisions have already been made.

Thirdly 'Each time I have been to meetings with reps from your dept my position has been railed as we haven.t taken any notice because there is no one else with the type of setup' you have or 'we can't make exceptions for one person.' Totally irresponsible attitude made by the representatives making such a statement.

Fourthly, My well approx. 1200 dia is at best able to provide approx.

6000 gallons per hour. this is without exception when there is good rainfall and there is no need to irrigate. when I most need to irrigate the well is almost without exception only able to yield 3,000 gph and often less able to provide that much.

At times it is only able to provide 800 gph.

I am now not able to provide the physical energy needed to irrigate and have listed the irrigation portion of the well for sale but have not been granted any concession on the licence or the annual fees your dept charge even though I have not received any offer of any sort for it's purchase or lease.
