

02 Adaptive Governance

We own the problem, we look forward, we seek the solution, and we transform together

01 Active & Adaptive Management

We seek to understand how our landscapes function, we innovate, we learn by doing, and we do to learn

03 Practical first steps for NSW Government

- Ensure plans set the tone for the future and deliver outcomes
- Devolve meaningful decision making to regional managers
- Enable National Parks & Wildlife Services, Department of Primary Industries and Forestry Corporation of NSW to work together on-the-ground
- Streamline planning and activities to reduce inefficiencies and duplication
- Seek sensible cost recoveries

Brigalow and Nandewar Community Conservation Area as a whole
Sets the national benchmark for:

- Innovative and genuine multi-use management
- Balancing mutually inclusive values
- Planning and managing for ongoing change
- Landscape management and stewardship
- Resilient communities and sustainable industries

- We try to preserve things in their historical locations
- We plan for a steady-state world
- We use hindsight and trial and error to learn
- We use centralised, command and control rules
- We focus on process, rather than outcomes
- We try to create perfect knowledge before we act

What we typically do

What we can do now

What we will become

Model for adaptive governance and management, including active interventions
