Q1

First name
Keelah

Q2

Last name
Lam

Q3

Email
[REDACTED]

Q4 Yes
Can we contact you about your submission (if needed)?

Q5 Yes
Can we add your email to our mailing list for occasional updates on this topic?

Q6 Other (please specify).:
What best describes you? I have serious concerns about loss of biodiversity at such a critical time

Q7 Statewide NSW
What best describes your main regional interest?

Q8

I agree to have my submission published with my name.

Your submission may be published. If you do not want your personal details or responses published, please tell us here.

Q9

What do you consider is the most significant action(s) we can undertake to protect and restore biodiversity and ecosystem function on private lands?

Stop landowners self-assessment. So much land clearing, both mature trees and smaller trees, has been done over the last 5 years and previously cleared land which has regrown and can support native wildlife is allowed to be cleared and puts survival of native species at risk.

Self assessment must stop, proper diligence from authorities and observation by GPS must be regularly carried out.

Q10

How can we further improve soil, water and vegetation management to protect and restore biodiversity while delivering sustainable economic outcomes?

Just as in the city, country landowners do not always value nature. Economic incentives are needed together with clear education showing benefits of preserving soil and in tact forests.

Q11

What do you consider is the most effective way to further support and enable landholders to deliver sustainable land management and production outcomes?

Landholders often do not understand the rules even as lax as they are right now. The information on the rules must be made clear and easy to understand. More staff must be employed to ensure the rules are understood and be able to respond to queries.

Q12

Is there any other information about this topic you would like to share with us?

Please change the rules ASAP to ensure this shocking rate of landclearing is stopped before it reaches tipping point which is nearing day by day.
