Subject: Local environmental concerns from Fruit Bats

To whom it may concern

Attached is an article dated from May 2015

I have been documenting the local destruction caused by the Fruit Flying bats on the Central Coast area for sometime now.

Criticism has been directed to the Office of Environmental & History department so the Premier is fully aware of how I feel about this matter. Most of the correspondence I have had from the Departments had little or no idea how serious the bat problem really is. I have blamed the bats to be the main spreader of Myrtle Rust Disease, which had been detected since April 2010. The species of trees that was going to be effected pointed to the bats doing the most damage

Below is the concerns locals have had in Batemans Bay

www.abc.net.au/news/2015-08-30/residents-up-in-arms-over-batemans-bay-bat-plague/6734802

Where else do people turn to other then The local Federal Member of Parliament Debra O'Neill & local State Member Lucy Wicks on the Central Coast

Kind regards

David Kellett
