I am a local builder in the Condobolin district, & I believe if the timber industry in our district was to cease it would be a major economical blow to the town. As Grant's Timber employ 12 people that would be 12 families effected & community this size can't suffer another hardship.

I have been using cypress timer for 35 years as it is termite resistant and the timber is always ready available & this product is used extensively in the building trade as it is a very good framing and flooring product. If I had to purchase this product elsewhere it would only add to the cost of building & the product many not always be available.

The Condobolin timber plant is run most efficiently with no by waste product, all waste is recycled & used as a garden mulch etc.

The town of Condobolin has suffered drought for the past ten years & if the timber mill is made close its another financial disaster to the town.

Please leave our mill alone & let them continue to operate a successful business.
